SIMING LI

(631) 682-5011 | lisiming3278@gmail.com | LinkedIn | Portfolio | Open to Relocation

EDUCATION

Pace University *Aug 2024 – Jun 2026*
Master of Science in Computer Science *New York, NY*

Huaqiao University *Sep 2019 – Jun 2023*
Bachelor of Engineering in Software Engineering *Xiamen, China*
Relevant Coursework: Algorithms & Computing Theory, Computer Systems & Concepts, Database Management Systems, Computer Networks, Artificial Intelligence, Parallel Computing, Mobile Application Development

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL , Kotlin
Frameworks & Tools: Spring Boot, React, REST APIs,HTML/CSS
Databases: MySQL
Data&APIs: S3, Lambda, Pub/Sub, Dataflow
Cloud & DevOps: Docker, GitHub Actions

PROFESSIONAL EXPERIENCE

Apexus-Tech *Jul 2025 – Sep 2025*
Software Development Engineer Intern *Remote, US*

- Developed an internal analytics dashboard using React and TypeScript to visualize 8 key operational metrics, enabling data-driven daily reviews
- Integrated REST APIs and internal Python scripts with retry and transformation logic, automating 200+ daily data fetch operations without manual intervention
- Improved system reliability and release quality by triaging issues and delivering targeted fixes across frontend components and backend APIs
- Authored technical documentation (Markdown, Confluence) including setup guides and troubleshooting runbooks, reducing onboarding time from ~1 week to 3 days

Fujian Shike Intelligent Technology Co.Ltd. *Mar 2024 – May 2024*
Software Engineer Intern *Hybrid, China*

- Built an end-to-end PDF-to-dataset pipeline to convert technical documents into structured Markdown and JSON for downstream indexing and model training
- Designed schema-based parsing and deterministic normalization to clean formulas, code blocks, and tables, achieving 85%+ accuracy on sampled outputs
- Improved data quality and consistency through automated normalization of formatting, numerical values, and units across documents
- Reconstructed complex tables using LLM-assisted methods into structured formats (e.g., HTML/LaTeX), improving extraction quality from ~60% to 90%

PROJECTS

Fitness Habit Builder *Sep 2025 – Dec 2025*

- Developed an Android habit tracking application using Kotlin and Jetpack Compose with MVVM architecture, enabling users to manage habits, track streaks, and monitor progress
- Integrated Firebase Authentication and Firestore to support real-time data synchronization and offline-first persistence for user activity data
- Designed a configurable recommendation module and integrated external fitness APIs via Retrofit to deliver personalized workout suggestions
- Improved app reliability by implementing structured error handling and integrating crash monitoring with Firebase

Personal Blog System *Jun 2024 – Aug 2024*

- Built a Java Spring Boot blog platform based on the RuoYi admin framework, implementing RBAC, content management CRUD, pagination, and keyword search
- Designed MySQL schemas with ER modeling and indexing, and improved common list and search query performance through query tuning
- Containerized the application with Docker and set up GitHub Actions for automated build and test checks to streamline development workflows.
